

GradCAM++ Explainability Showcase — Custom EfficientNet V2 (Hub v2)

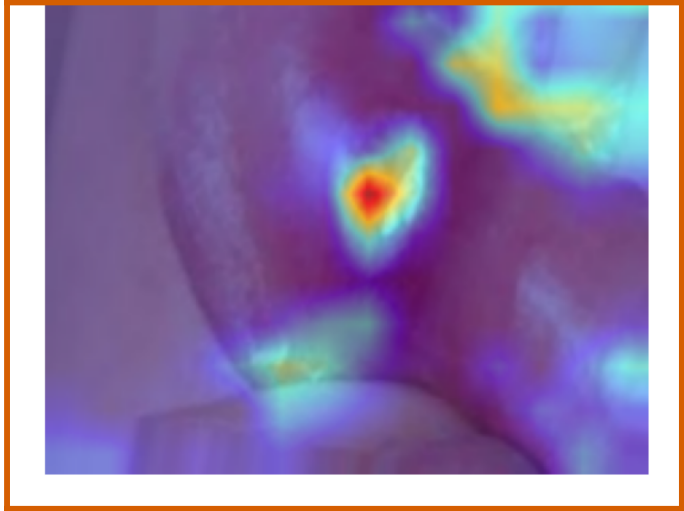

GradCAM++ selected over LIME: it yields tight, lesion-aligned focal hot-spots (see method-comparison figure). 8 best samples, ranked by lesion-focus accuracy.

1. CoS - lip vesicle

Focus: Single sharp focal dot exactly on the lesion

Original

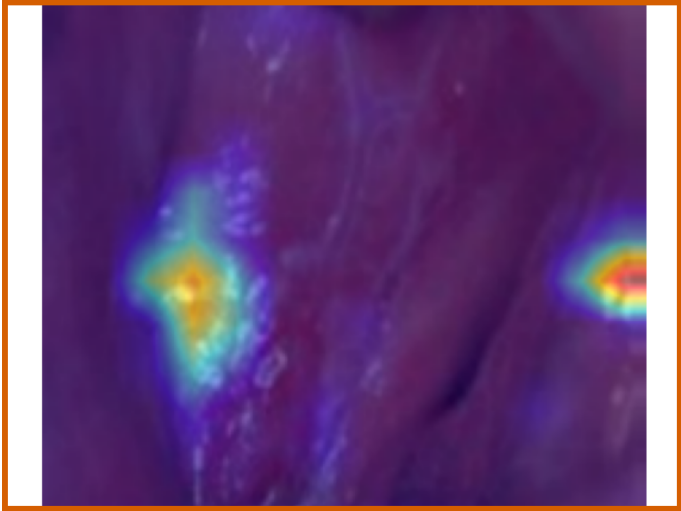

GradCAM++

2. OLP - bilateral patches

Focus: Two focal spots, one per visible patch

Original

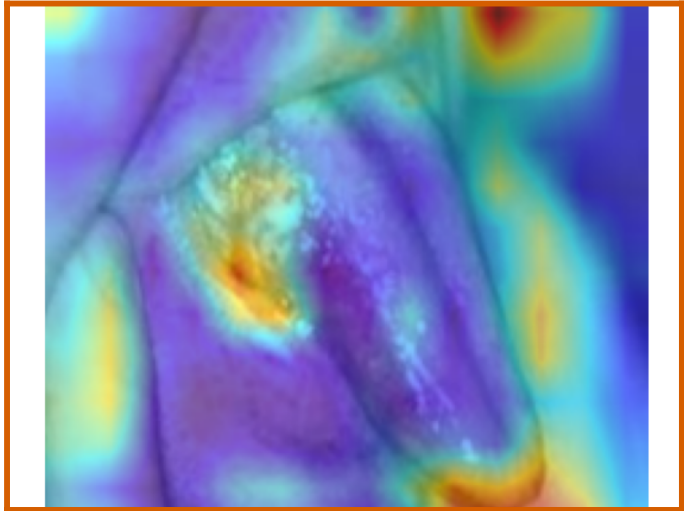

GradCAM++

3. OC - raised tongue lesion

Focus: Strong activation over the papillomatous lesion

Original

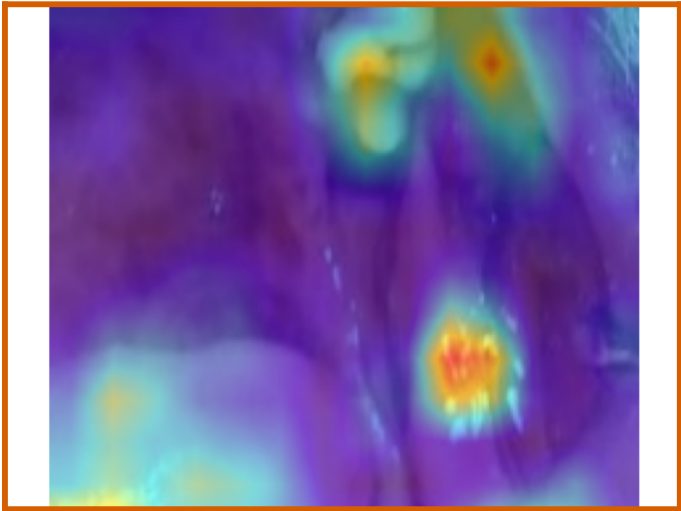

GradCAM++

4. Malignant - ulcerated region

Focus: Focal hot-spot on the malignant ulcer

Original

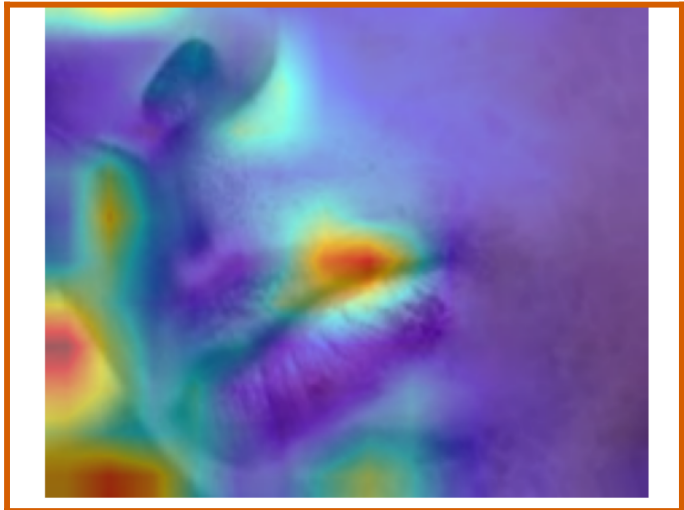

GradCAM++

5. Gum - inflamed lip margin

Focus: Heat concentrates on the inflamed lower lip

Original

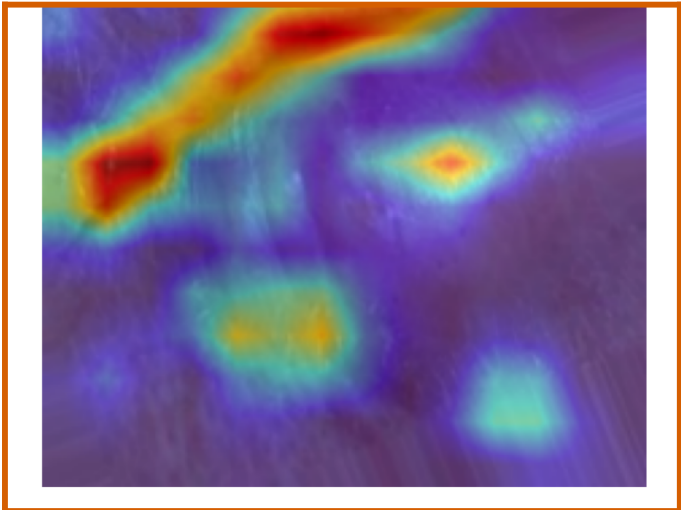

GradCAM++

6. CoS - perioral skin

Focus: Heat-map traces the linear lesion

Original

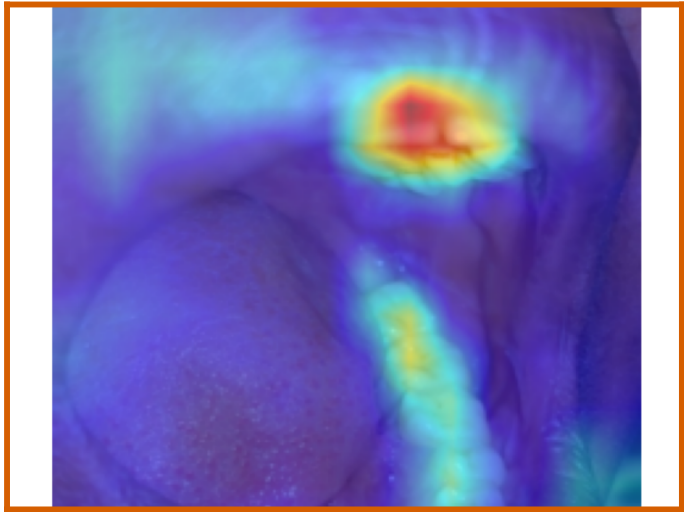

GradCAM++

7. Benign - tongue tip

Focus: Compact focal response at the tongue tip

Original

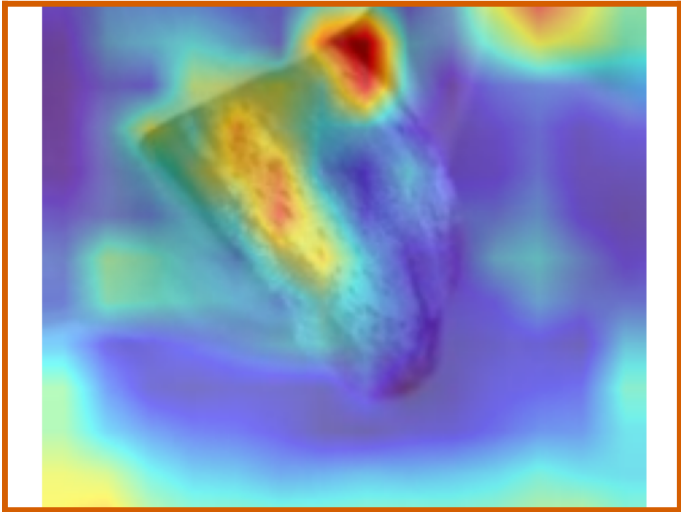

GradCAM++

8. OT - tongue surface

Focus: Focal activation on the affected tongue tip

Original

GradCAM++
